Truck Lock - Top Plate Fitting

The Truck Lock is designed to bolt to the underside of the truck and should be mounted with it's top face 200mm above the ground surface.

Truck locks provide a ready means of instantly securing a truck in a fixed position (but do not raise it), whilst allowing complete freedom of movement to be restored by a quick movement of the foot pedal.

Fixing by four M12 bolts

THE TABLE BELOW GIVES Kgs FORCE APPLIED BY BOTTOM OF PAD TO GROUND AT VARIOUS FITTING HEIGHTS

FITTING HEIGHT	KGf
204	19.1
202	40.0
200	55.0
198	80.0
196	85.0
195	95.0
